DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. Claim(s) 1, 3, 5, 8 fail(s) to recite sufficient structural elements and interconnection of the elements to positively position and define : 1) the section planes and "stud" (claim 1); 2) the first, second, third retaining members (claim s 3, 5, 8, respectively) so that an integral structure able to function as claimed is recited.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Lucatello in view of McAllister. The reference to Lucatello("333) teaches structure substantially as claimed including fixed table top (10), extension (34), retaining member (any connecting structure would provide a "retaining member as defined) the only difference being that there is no "stud", However, the patent to McAllister(figs. 2, 3) teaches the use of providing a "stud" for additional adjustment of the extension. It would have been obvious at the time of the invention to modify the structure of Lucatello to include a "stud", as taught by McAllister since such structures are conventional alternative structures used in the same intended purpose of providing a support and would have been reasonably predictable, thereby providing structure as claimed.

Claims 1-3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Fischer in view of McAllister. The patent to Fischer teaches structure substantially as claimed including fixed table top (2), extension (4a), retaining member (any connecting structure would provide a "retaining member as defined). the only difference being that there is no "stud". However, the patent to McAllister(figs. 2, 3) teaches the use of providing a "stud" for additional adjustment of the extension. It would have been obvious at the time of the invention to modify the structure of Fischer to include a "stud", as taught by McAllister since such structures are conventional alternative structures used in the same intended purpose of providing a support and would have been reasonably predictable, thereby providing structure as claimed.

Allowable Subject Matter

Claims 4-12 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references to Brennan, Kuba et al, Chen, Hong, McCoy, Law et al, Foster et al, Waxham et al, Kollar et al, Oddsen, Eusebi et al teach structure similar to applicant's.
